

Amendments to the Abstract

Replace the abstract with the following replacement abstract:

~~The invention describes a~~ A blown film extrusion system ~~(1), which comprises, as its characteristics,~~ includes a blowing head ~~(5), which~~ that extrudes a film tube ~~(9), further a pinch-off device (8), which~~ that pinches off the film tube ~~(9), and additionally film guiding elements (7, 13, 27, 28) that guide the film tube (9) between its extrusion by the blowing head and its pinching off~~ by the pinch-off device.

The ~~inventive aspect is that the~~ film guiding elements ~~(7, 13, 27, 28)~~ contain a porous, preferably microporous, material that provides for enhanced distribution of compressed air so as to guide the film tube evenly.

~~(Figure 2)~~

For the examiner's convenience, a clean text version of the replacement abstract (73 words) is presented below:

A blown film extrusion system includes a blowing head that extrudes a film tube, a pinch-off device that pinches off the film tube, and film guiding elements that guide the film tube between its extrusion by the blowing head and its pinching off by the pinch-off device. The film guiding elements contain a porous, preferably microporous, material that provides for enhanced distribution of compressed air so as to guide the film tube evenly.
